

BASF Canada Agricultural Solutions Student Experience – Corine

Meet Corine, a previous summer student that we had the pleasure of connecting with. This was Corine's second summer with BASF as a Summer Sales Intern in Southwestern Ontario. Corine had just finished her third year of the Food and Agricultural Business Co-op program at the University of Guelph and was working towards being in a customer facing role in Agri-lending. Corine is also a member of the University of Guelph CAMA Team who placed second at the NAMA Student Marketing Competition in Kansas City!

Here is what Corine had to say about her experience as a Summer Intern at BASF Canada Agricultural Solutions:

What is your favourite part about being a BASF Canada Agricultural Solutions summer intern?

My favourite part of my role with BASF is getting to see the province. I grew up in Central Ontario on a small cash crop farm where my dad grows corn, wheat, and edible beans. My territory is about 4 hours from where I grew up and is a whole different beast. In my territory, people grow everything from sugar beets to tomatoes and ginseng. Getting to see different operations of all shapes and sizes keeps my job interesting and has shown me how management techniques differ across the province. All in all, a great experience and a good excuse to try good, local food!

What are some of your key takeaways from this summer?

One thing I've learned is it takes a great team to navigate the busy sales season. I have had a great team of sales managers, sales reps, field biologists, technical service specialists and other summer students who are always there to answer a question or bounce an idea off of. BASF is a company full of smart and helpful people who want to see you succeed in not only your summer role, but full-time roles down the line.

What is one thing you would tell a fellow student who is looking at internship opportunities with BASF Canada Agricultural Solutions?

BASF has so many different opportunities when it comes to summer jobs. If research is up your alley, BASF has research facilities across Canada focusing on chemical development and InVigor breeding. If you love talking to customers, the Summer Sales Intern role is a great first step towards a career in agronomy. BASF offers not only a wide variety of positions, but also provides support in those roles to help you succeed.
