

BASF Canada Agricultural Solutions Student Experience – Donovan

Meet Don, one of our recent summer associates. Don completed his Bachelor of Science in Agriculture from the University of Lethbridge and joined the BASF team to work in the Canola Seed Production Program as an Agronomist Summer Associate

We had the pleasure of catching up with Don following his first summer experience with BASF. Here's what he told us:

What was your favorite part about being a BASF Canada Agricultural Solutions summer student?

My favourite part about being a summer associate was the connections I got to make throughout the summer. Connections with other interns, agronomists, other BASF employees, and the growers. All of these people have helped me to learn more about our work in the agriculture industry.

What are some of your key takeaways from this summer?

One of the most important things I took away from this summer is the importance of teamwork in producing a great crop. Not everyone can know everything or make all the right calls, so it's helpful to ask for other opinions and learn from those around you.

What is one thing you would tell a fellow student who is looking at internship opportunities with BASF Canada Agricultural Solutions?

For anyone looking at becoming a summer associate, it's okay if you don't know much about the business, as long as you're ready and willing to learn. My previous experience in agriculture has been on the ranching side, so my knowledge was limited when it came to farming. However, with so many great farmers and agronomists in the program, I learned a lot and look forward to learning more.
