

# IT'S A PRE-SEED HERBICIDE, BUT WITH 'TUDE.

As the first Group 27 registered for pre-seed use in canola, Certitude® herbicide sharpens the performance of your glyphosate application on challenging weeds and helps to mitigate herbicide resistance on your farm.

- Lets you save Group 14 chemistries for cereals and pulses
- Delivers excellent performance on volunteer canola and resistant biotypes of kochia, including Group 14
- Backed by the Performance Support Guarantee with the Advanced Weed Control Program

SUPPORTED BY THE

**ADVANCED WEED CONTROL**

PROGRAM

## Pull out all the stops to strike back against weeds.

With Certitude herbicide, you can set your canola up for success this coming season. Applied with glyphosate, Certitude can help you manage herbicide-resistant kochia, now present in Western Canada. It's also a great defense against challenging weeds like these: cleavers, flixweed, lamb's quarters, narrow-leaved hawk's beard, stinkweed and wild buckwheat. Whether you live in brown or black soils zones, Certitude helps you strike back against tough weeds.

# See how Certitude stands up. (And weeds back down.)

Watch for these three benefits of using Certitude.

- Effectively controls volunteer canola and kochia
- Manages herbicide resistance
- Increases profitability

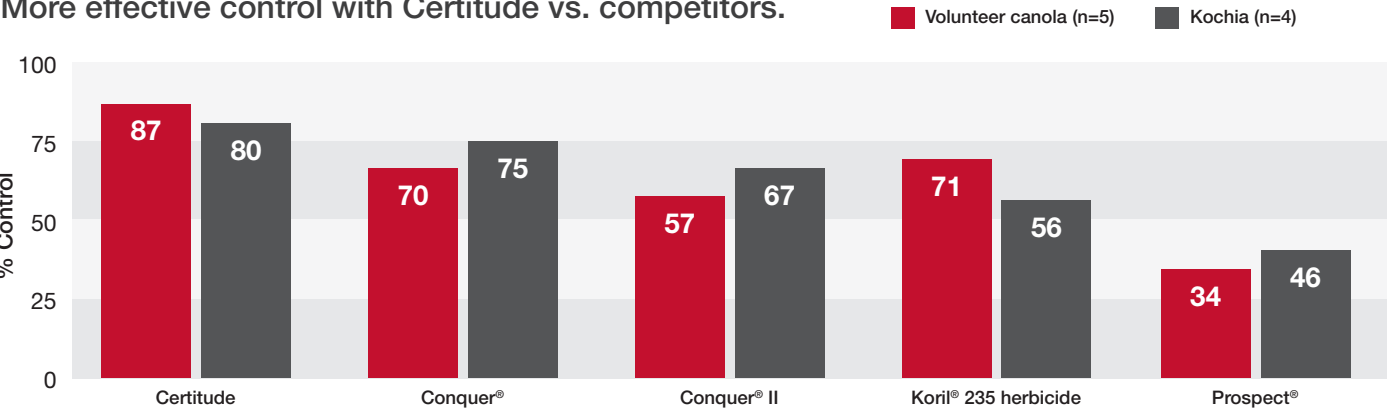

Groups:	Packaging:	Rates:
Group 27 & Group 6	Liquid co-pack	40 ac/case

## Less volunteer canola and kochia with Certitude vs. competitors.

Source: BASF Small Plot Trials, Regina, Saskatchewan, 2022; canola and kochia control with medium droplets, 14 to 21 Days After Treatment

## More effective control with Certitude vs. competitors.

Source: BASF Small Plot Trials, 2019; 14 to 21 Days After Treatment
