

# Selecting a clubroot-resistant option for your InVigor® hybrid canola.

All agronomic recommendations include thorough scouting and implementing a strong integrated pest management strategy. Visit [clubroot.ca](http://clubroot.ca) for more information.

All growers should create and implement a sanitation protocol on their farm.

<sup>1</sup> When growing clubroot-resistant hybrids, we recommend using first generation clubroot-resistant hybrids for two cycles OR until clubroot symptoms appear, whichever comes first, then consider switching to second generation clubroot-resistant hybrids. All InVigor clubroot-resistant hybrids have been developed to be resistant to the most predominant clubroot pathotypes found in Canada at the time of their registration.

<sup>2</sup> For more information on clubroot-resistant options from BASF, visit [agsolutions.ca/clubroot](http://agsolutions.ca/clubroot) or call AgSolutions® Customer Care at 1-877-371-BASF (2273).

Results may vary on your farm due to environmental factors and preferred management practices.
