The products listed above need to be protected from freezing. Heated storage and handling requires storing the product in a cool, dry, ventilated area. They should be separated from feed or foodstuffs, and **temperature should be maintained generally between 5°C to 20°C**. For individual products, please call your BASF **AgSolutions®** Grower or Retail Representative or **AgSolutions** Customer Care for more specific storage requirements.

Liquid products don't always work as intended if they freeze. For some liquid products, it will be required to thaw them out entirely and thoroughly mix or shake them. This does not, however, guarantee proper functionality, performance or efficacy of the product, even if they do not indicate heated storage on the MSDS or product label. If you have access to heated storage, it is best to avoid freezing all remaining inventory of liquid crop protection products when possible.

Always read and follow label directions.
