

### A specialty oil profile.

A 200 series InVigor® canola hybrid that combines yield with a specialty oil profile. InVigor Health L258HPC also has our patented Pod Shatter Reduction technology, first-generation clubroot resistance and offers very strong standability.

	<b>Yield</b>	<b>104.9%</b> of the checks (InVigor 5440 and Pioneer® 45H29) in 2017 WCC/RRC <sup>1</sup> trials
	<b>Traits</b>	Patented Pod Shatter Reduction technology First-generation clubroot resistance <sup>2</sup> Specialty oil
	<b>Growing zones</b>	Mid to long
	<b>Standability</b>	Very strong
	<b>Maturity</b>	1.5 days later than the average of the checks
	<b>Blackleg</b>	R – Blackleg resistant

Please note: Maturity and standability are based on performance ratings and data compiled from several InVigor internal trials over multiple years. Results may vary on your farm due to environmental factors and preferred management practices.

<sup>1</sup> Western Canada Canola/Rapeseed Recommending Committee.

<sup>2</sup> To predominant clubroot pathotypes identified in Canada at the time of their registration.

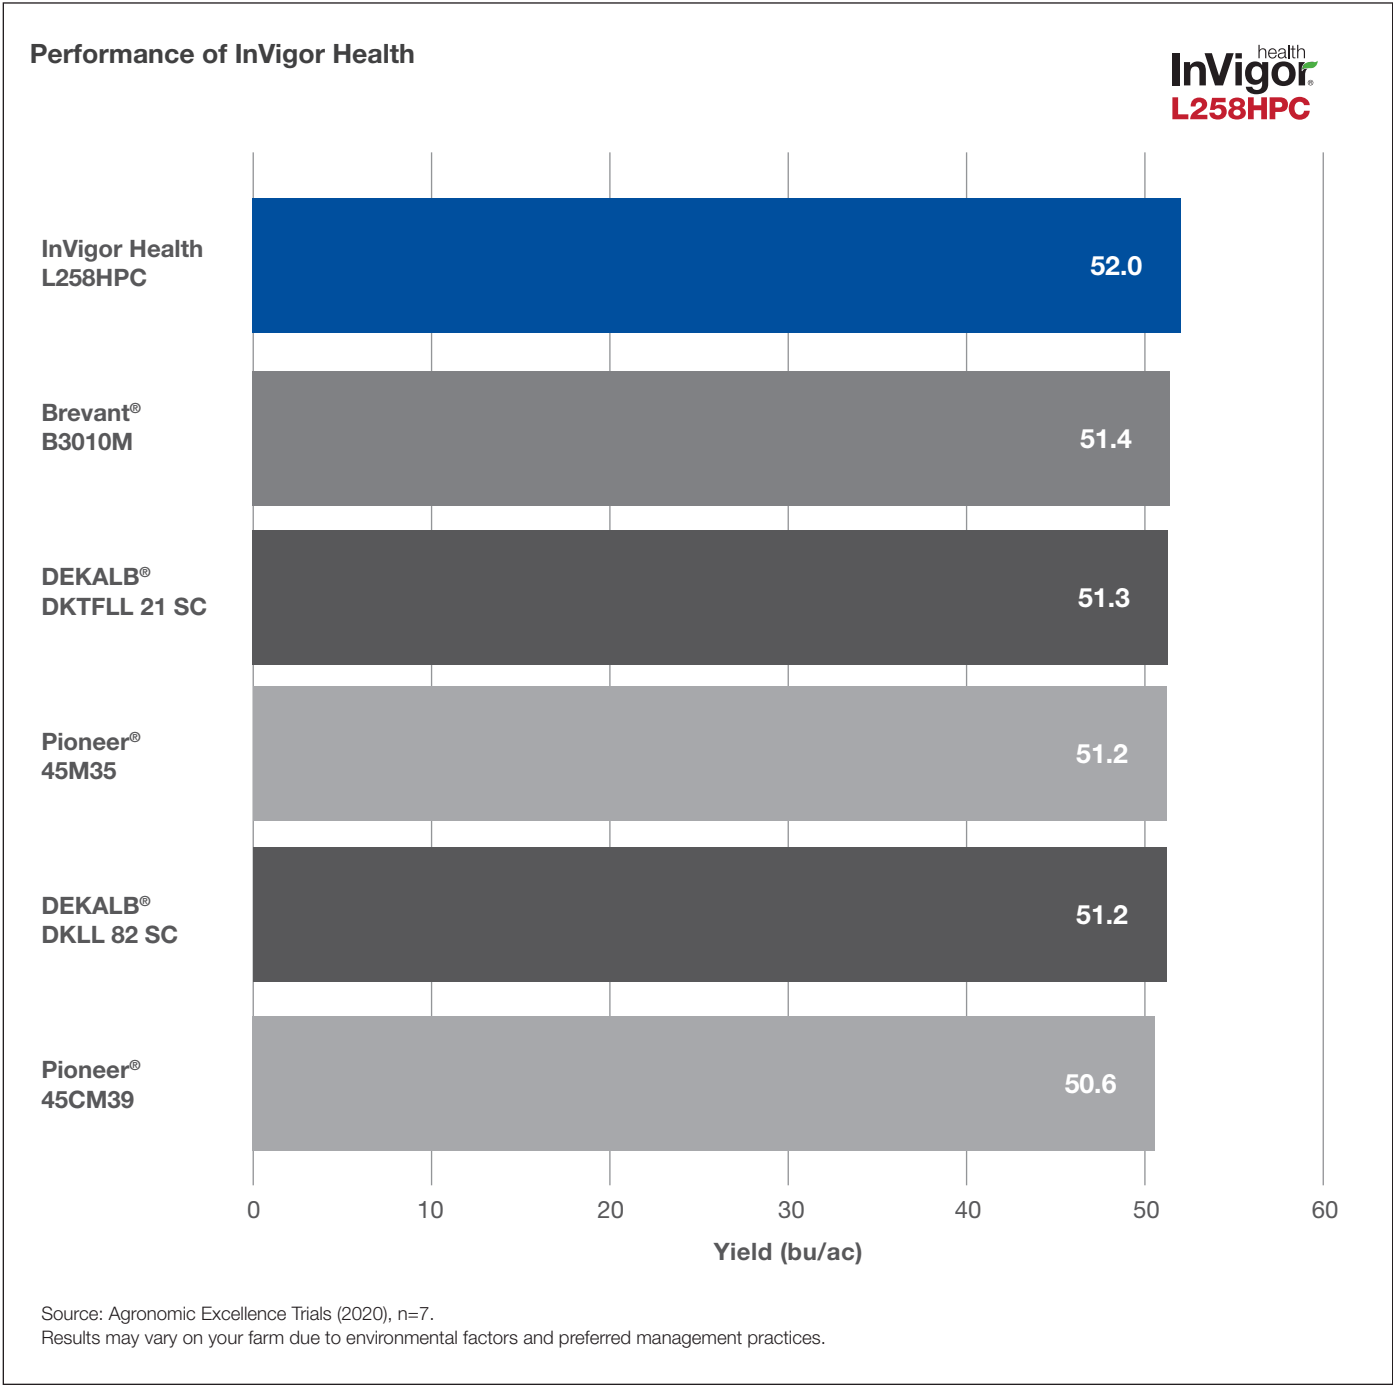

### The Pod Shatter Reduction advantage.

The patented Pod Shatter Reduction technology of InVigor continues to revolutionize the way canola growers approach their entire season. With InVigor Health L258HPC, growers have increased harvest flexibility with the option to straight cut or delay swath without sacrificing yield potential. Other advantages include:

- Helps protect your yield
- Reduces harvest loss, including from late fall harvests and overwintered canola
- Minimize the impact of late-season wind, hail and snow
- Longer pod fill resulting in larger seeds and maximizing yield
- Reduces volunteer canola

# Premium yields.

Here's how InVigor Health L258HPC performed in localized replicated trials in 2020.
