

INVIGOR HYBRID CANOLA InVigor Health Hybrid

A specialty oil profile.

The demand has been met for a clubroot-resistant InVigor® Health hybrid canola that can also be straight cut. InVigor Health L258HPC is the first InVigor Health hybrid with patented Pod Shatter Reduction technology plus first-generation clubroot resistance*. This high-yielding, strong-standing hybrid is suitable for all mid to long growing zones.

The Pod Shatter Reduction advantage.

The patented Pod Shatter Reduction technology of InVigor continues to revolutionize the way canola growers approach their entire season. With InVigor Health L258HPC, growers now have increased harvest flexibility with the option to straight cut or delay swath without sacrificing yield potential. Other advantages include:

- Helps protect your yield
- Reduces harvest loss, including from equipment losses, fall harvests and overwintered canola
- Minimize the impact of late-season wind, hail and snow
- Longer pod fill resulting in larger seeds and maximizing yield
- Reduces volunteer canola

	Yield	104.9% of the checks (InVigor 5440 and Pioneer® 45H29) in 2017 WCC/RRC trials**
	Traits	Patented Pod Shatter Reduction technology First-generation clubroot resistance* Specialty oil
	Growing Zones	All mid to long growing zones
	Standability	Very strong
	Maturity	1.5 days later than the average of the checks
	Blackleg	R – Blackleg resistant

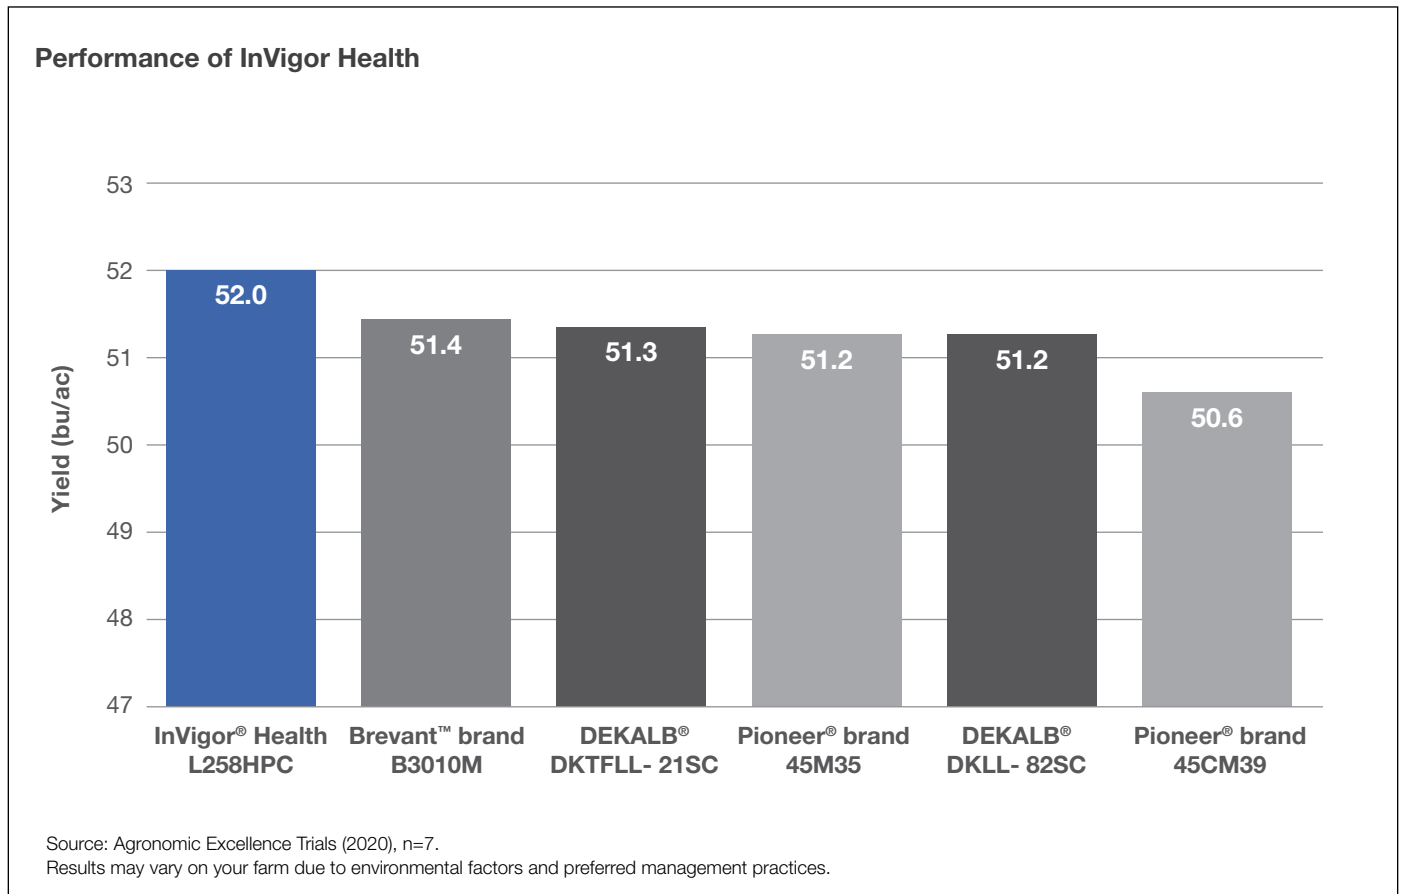

Please note: Maturity and standability are based on performance ratings and data compiled from several InVigor internal trials over multiple years. Results may vary on your farm due to environmental factors and preferred management practices.

*To predominant clubroot pathotypes identified in Canada at the time of their registration.

**Western Canada Canola/Rapeseed Recommending Committee.

Premium yields.

Here's how InVigor Health L258HPC performed in localized replicated trials in 2020.
